FOR IMMEDIATE RELEASE

LOLLICUP USA PLANS TO INCREASE THERMOFORMING PRODUCT LINE & JOB OPPORTUNITIES IN CHINO, CA

CHINO, Calif., June 23, 2014 – Lollicup USA, a growing manufacturer and distributor of Karat disposable paper & plastic foodservice packaging products, has plans to increase production at its headquarters in Chino, CA. After two months of successful production of disposable plastic cups, Lollicup USA started distributing its Karat® line of “Made-in-USA” cups to its customers in May.

Due to the efficiency of Lollicup USA’s high-speed German equipment that allows Lollicup to manufacture up to one million cups per day, Lollicup has decided to expand its thermoform product line. Thermoforming is a manufacturing process where plastic is molded and trimmed to create a usable product. Thermoforming differs from injection molding, blow molding, and other forms of processing plastics. Thermoform benefits range from shorter lead times, cost-efficiency, and a large freedom of design.

Since Lollicup’s headquarters move back in October 2013 the company has hired over 80 new personnel and plans on creating over 50 more job opportunities by the end of the year. In the near future, Lollicup plans to bring its Karat manufacturing to the east coast of America.
