FOR IMMEDIATE RELEASE

Lollicup USA's continued prosperity leads to need for new warehouse

CHINO, CA (June 1, 2015) – Lollicup USA, Inc. is proud to announce that it is acquiring an additional warehouse, measuring 150,000 square feet. The company has experienced rapid growth since the June 2014 grand opening of its 300,300-square-foot facility. The increase in manufacturing and sales has led to a strong need for more space. Lollicup is in a cycle of constant advancement. The space in the warehouse at Lollicup's headquarters is filling up fast and more room is required for the company's continued success.

The massive Chino warehouse began with only a few machines used to produce Karat disposables in the United States. Since January 2015, Lollicup's Chino warehouse has seen a large increase in machines. A second printer for custom printing (six colors) was installed in January, a third (six colors) was installed in March and a fourth printer (eight colors) is currently being installed.

Four additional paper cup forming machines have been installed this year – two in April and two in May. A thermoforming machine for PET (polyethylene terephthalate) 98 mm lids and an extruder were installed in March. To say business is booming, would be an understatement.

Alan Yu, Lollicup's cofounder and CEO, said there are 80,000 cases of cups and lids produced a month and by the end of this year the company will be able to produce 160,000 cases of cups and lids per month. With this additional facility, the company will have increased its space in Chino by a little over 50 percent. Yu said the company's sales have grown 40 percent each year, and are expected to reach \$120 million this year.

He also said Lollicup now employs more than 200 people and will provide even more employment opportunities as it continues to flourish and expand. Along with the company's expansion in Chino, more space is sought in the Southeast region of the United States to help supply demand. With the extra space, Lollicup will certainly continue to thrive.
